

WorkshopPLUS - Azure Logic Apps Developer

WorkshopPLUS

Duration: 3 Day [Remote | Onsite]
Difficulty Level: 300 - Intermediate

Description

This developer-focused workshop builds practical skills for designing, building, deploying, and operating workflow-driven integration solutions with Azure Logic Apps. The content moves from platform and runtime fundamentals into workflow design, hosting decisions, production readiness, testing, applied scenarios, and repeatable delivery.

Objectives

- Understand Logic Apps workflows, triggers, actions, connectors, control flow, and deployment boundaries across Consumption and Standard.
- Apply hosting, security, networking, observability, testing, deployment, and CI/CD guidance to production integration solutions.
- Build and manage workflows using the Azure portal and Visual Studio Code.

Outcomes

- Attendees leave prepared to choose the appropriate Logic Apps hosting model, design secure and observable workflows, and build and deploy production-ready integration solutions.

Hands-on Labs

- Six guided labs cover request-response APIs, scheduled processing, order fulfillment, event-driven blob processing, workflow testing, and inline .NET code.
- Portal labs emphasize workflow design and operations; Visual Studio Code labs use Logic Apps Standard for local development.

Agenda

- Orient the audience with the workshop structure and the Overview module.
- Establish the technical model with Logic Apps Structure, Runtime Lifecycle, and Core Concepts.
- Use Hosting Plans to compare Consumption and Standard and discuss pricing, networking, and capacity.
- Spend substantial time on Build & Manage using the Azure portal and Visual Studio Code.
- Select Advanced Patterns, Security & Limits, and Design Guidance based on audience maturity.
- Close with Use Cases so attendees connect platform capabilities to applied scenarios.

Requirements and Delivery Outline

Requirements

Skill Requirements

- Basic Azure knowledge and familiarity with APIs, events, or workflow automation concepts.
- An Azure subscription with permission to create resource groups, Logic Apps resources, and API connections is recommended for labs.

Tool Requirements

- Portal labs require Azure portal access and permission to create API connections.
- Visual Studio Code labs require the Azure Logic Apps (Standard) extension and Azure Functions Core Tools.

Delivery Outline

Workshop Modules

- Overview
- Logic Apps Structure
- Runtime Lifecycle
- Core Concepts
- Advanced Patterns
- Hosting Plans
- Design Guidance
- Connectors and Integration Accounts
- Security & Limits
- Monitoring & Troubleshooting
- Workflow Testing
- Agentic Workflows
- Use Cases
- Build & Manage

Lab Catalog

- Lab 01: HTTP Product API (Azure portal, Consumption).
- Lab 02: Timer Daily Report (Azure portal, Consumption).
- Lab 03: Order Fulfillment (Visual Studio Code, Standard).
- Lab 04: Event Grid Blob Processor (Azure portal, Consumption).
- Lab 05: Logic App Testing (Azure portal, Consumption or Standard).
- Lab 06: Inline .NET Code (Visual Studio Code, Standard).
